

Cherubim Chariots: Exploring the Extradimensional Hypothesis

Have you ever wondered about the true nature of the cherubim? These enigmatic beings are described in the Bible as having four faces, four wings, and a fiery appearance. They are often depicted as guarding the throne of God or carrying the Ark of the Covenant.

But what if the cherubim were not merely heavenly beings, but rather extraterrestrial vehicles? This theory, known as the extradimensional hypothesis, is supported by a wealth of evidence from the Bible, ancient texts, and modern scientific research.

Cherubim Chariots: Exploring the Extradimensional Hypothesis by Josh Peck

Robert C. Smith, one of the foremost proponents of this theory, studied metallurgy and had two doctorate degrees. He argued that the cherubim

described in the Bible were not living creatures but rather man-made objects, constructed from a special type of metal that allowed them to fly.

Smith identified several key passages in the Bible that support his theory. For example, in Ezekiel 1:4-28, the prophet describes the cherubim as having a "wheel within a wheel" and "rings full of eyes." This description is remarkably similar to the way that modern-day UFOs are often described.

In another passage, in Exodus 25:18-22, God instructs Moses to build the Ark of the Covenant, a sacred chest that was to be carried by the cherubim. The Ark is described as being made of acacia wood and overlaid with gold. However, Smith argues that the Ark was not a simple wooden chest, but rather a sophisticated electronic device that could generate a powerful electromagnetic field.

This electromagnetic field, Smith believes, is what allowed the cherubim to fly. He points out that the Bible describes the cherubim as being able to move in any direction, even up and down, without having to turn around. This is a feat that would be impossible for a living creature, but it is easily explained if the cherubim were extraterrestrial vehicles.

In addition to the evidence from the Bible, Smith also cites a number of ancient texts that support the extradimensional hypothesis. For example, the Sumerian Epic of Gilgamesh describes a group of beings called the Anunnaki who came to Earth from the heavens in flying chariots. The Anunnaki are often depicted as having a humanoid appearance, but they are also described as having wings and being able to travel at great speeds.

Smith argues that the Anunnaki were the same beings as the cherubim described in the Bible. He believes that the Anunnaki came to Earth thousands of years ago in Free Download to mine gold and other resources. They built the pyramids and other megalithic structures as a way to demonstrate their power and to control the human population.

Over time, Smith believes, the Anunnaki left Earth, but they left behind their technology, which was later used by the Israelites to build the Ark of the Covenant and the cherubim.

The extradimensional hypothesis is a controversial theory, but it is one that is supported by a wealth of evidence. If Smith is correct, then the cherubim were not merely heavenly beings, but rather extraterrestrial vehicles that played a major role in human history.

Implications of the Extradimensional Hypothesis

If the extradimensional hypothesis is correct, then it has a number of implications for our understanding of the world. First, it means that we are not alone in the universe. There are other intelligent beings out there, and they have been visiting Earth for thousands of years.

Second, it means that our technology is not as advanced as we think it is. The Anunnaki had access to technology that was far beyond our current understanding. They were able to build flying chariots, create electromagnetic fields, and manipulate the human population.

Third, it means that the Bible is not just a book of religious stories. It is also a historical document that contains information about our true origins and our place in the universe.

The extradimensional hypothesis is a challenging theory, but it is one that is worth considering. If it is correct, then it will change our understanding of the world in a profound way.

Cherubim Chariots is a groundbreaking book that explores the possibility that the biblical cherubim were not merely heavenly beings, but rather extraterrestrial vehicles. This theory, known as the extradimensional hypothesis, is supported by a wealth of evidence from the Bible, ancient texts, and modern scientific research.

If the extradimensional hypothesis is correct, then it has a number of implications for our understanding of the world. First, it means that we are not alone in the universe. Second, it means that our technology is not as advanced as we think it is. And third, it means that the Bible is not just a book of religious stories, but also a historical document that contains information about our true origins and our place in the universe.

Cherubim Chariots is a must-read for anyone who is interested in the Bible, ancient history, or the possibility of extraterrestrial life. It is a book that will challenge your assumptions and open your mind to new possibilities.
