The Canon EOS 80D has a number of basic functions that you'll need to know before you can start taking pictures. These functions include:

- **Aperture:** Aperture is the size of the opening in the lens that allows light to enter the camera. A larger aperture (lower f-number) creates a narrower depth of field, while a smaller aperture (higher f-number) creates a wider depth of field.
- **Shutter speed:** Shutter speed is the amount of time that the shutter remains open to expose the image sensor to light. A faster shutter speed freezes motion, while a slower shutter speed creates motion blur.
- **ISO:** ISO is the sensitivity of the image sensor to light. A higher ISO setting makes the camera more sensitive to light, but it also increases the amount of noise in the image.
- **Exposure compensation:** Exposure compensation allows you to adjust the exposure of the image by increasing or decreasing the amount of light that enters the camera.

- **White balance:** White balance adjusts the color temperature of the image to match the lighting conditions.

The Canon EOS 80D also has a number of advanced features that you can use to take your photography to the next level. These features include:

- **Autofocus:** The 80D has a powerful autofocus system that can track moving subjects with ease.
- **Continuous shooting:** The 80D can shoot up to 7 frames per second in continuous shooting mode.
- **Built-in flash:** The 80D has a built-in flash that can be used to fill in shadows or provide additional illumination in low-light conditions.
- **Wi-Fi and Bluetooth connectivity:** The 80D can be connected to your smartphone or tablet via Wi-Fi or Bluetooth, allowing you to transfer images and control the camera remotely.
